

Area and Perimeter:

Perimeter: **the distance all the way around the sides of a shape.**

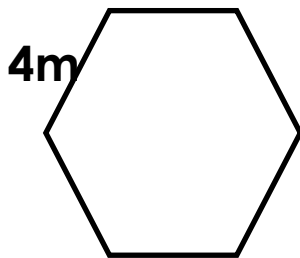

$$(11 \times 2) + (5 \times 2) \\ 22 + 10 = 32\text{cm}$$

OR

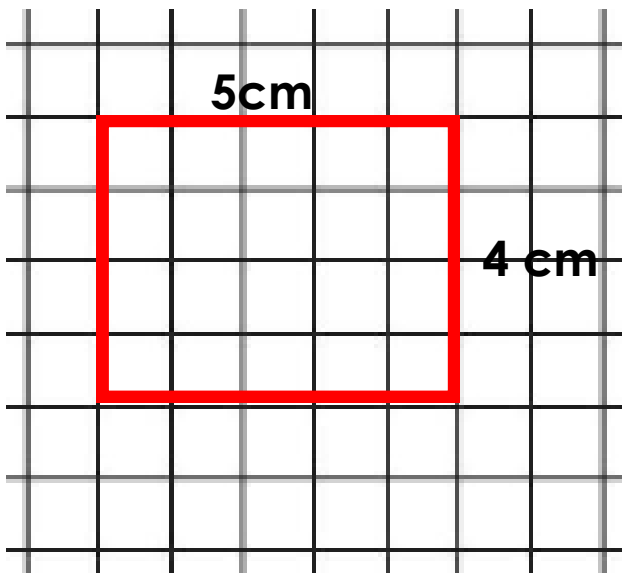

$$11 + 11 + 5 + 5$$

If it is a regular shape (all sides equal) then multiply by the number of sides.

$$4 \times 6 = 24\text{m}$$

Area: **the amount of space a shape takes up.**

$$5 \times 4 = 20 \text{ cm}^2$$
