

# 4U'S GOLD AWARD WORK OF THE WEEK!

William

## FLOWER

The flower attracts insects by being brightly coloured.  
Plants need insects to bring pollen from other flowers so they can make seeds.

## Stem

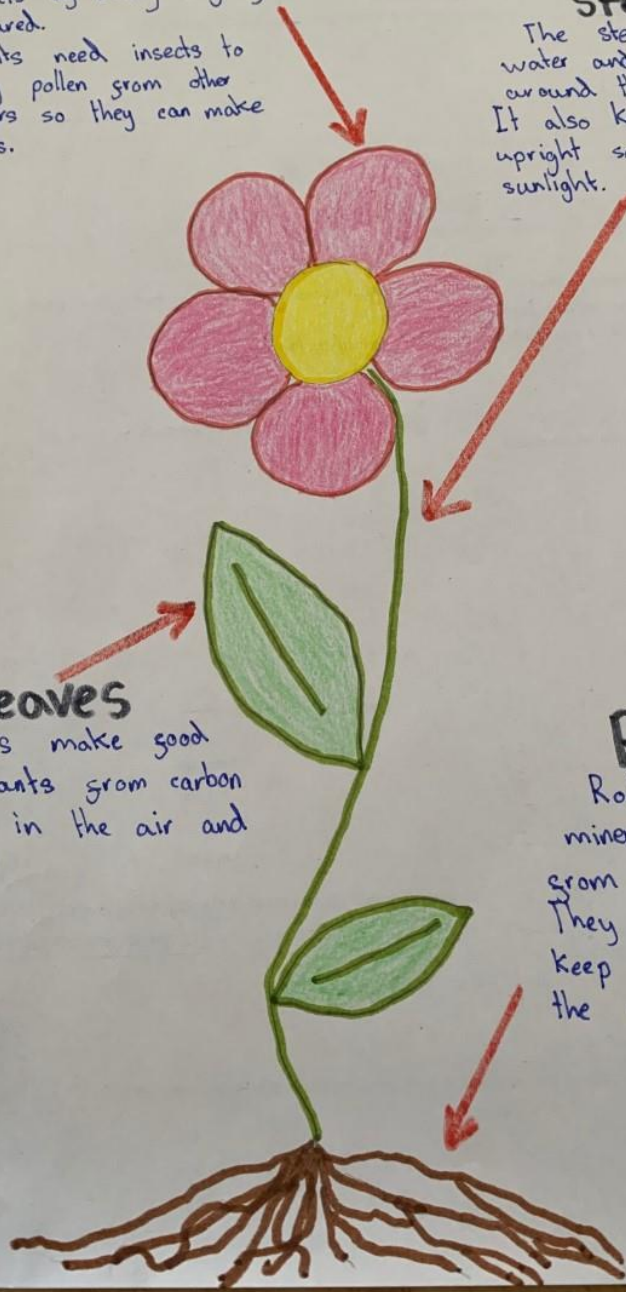

The stem transports water and nutrients around the plant.  
It also keeps the plant upright so it can get sunlight.

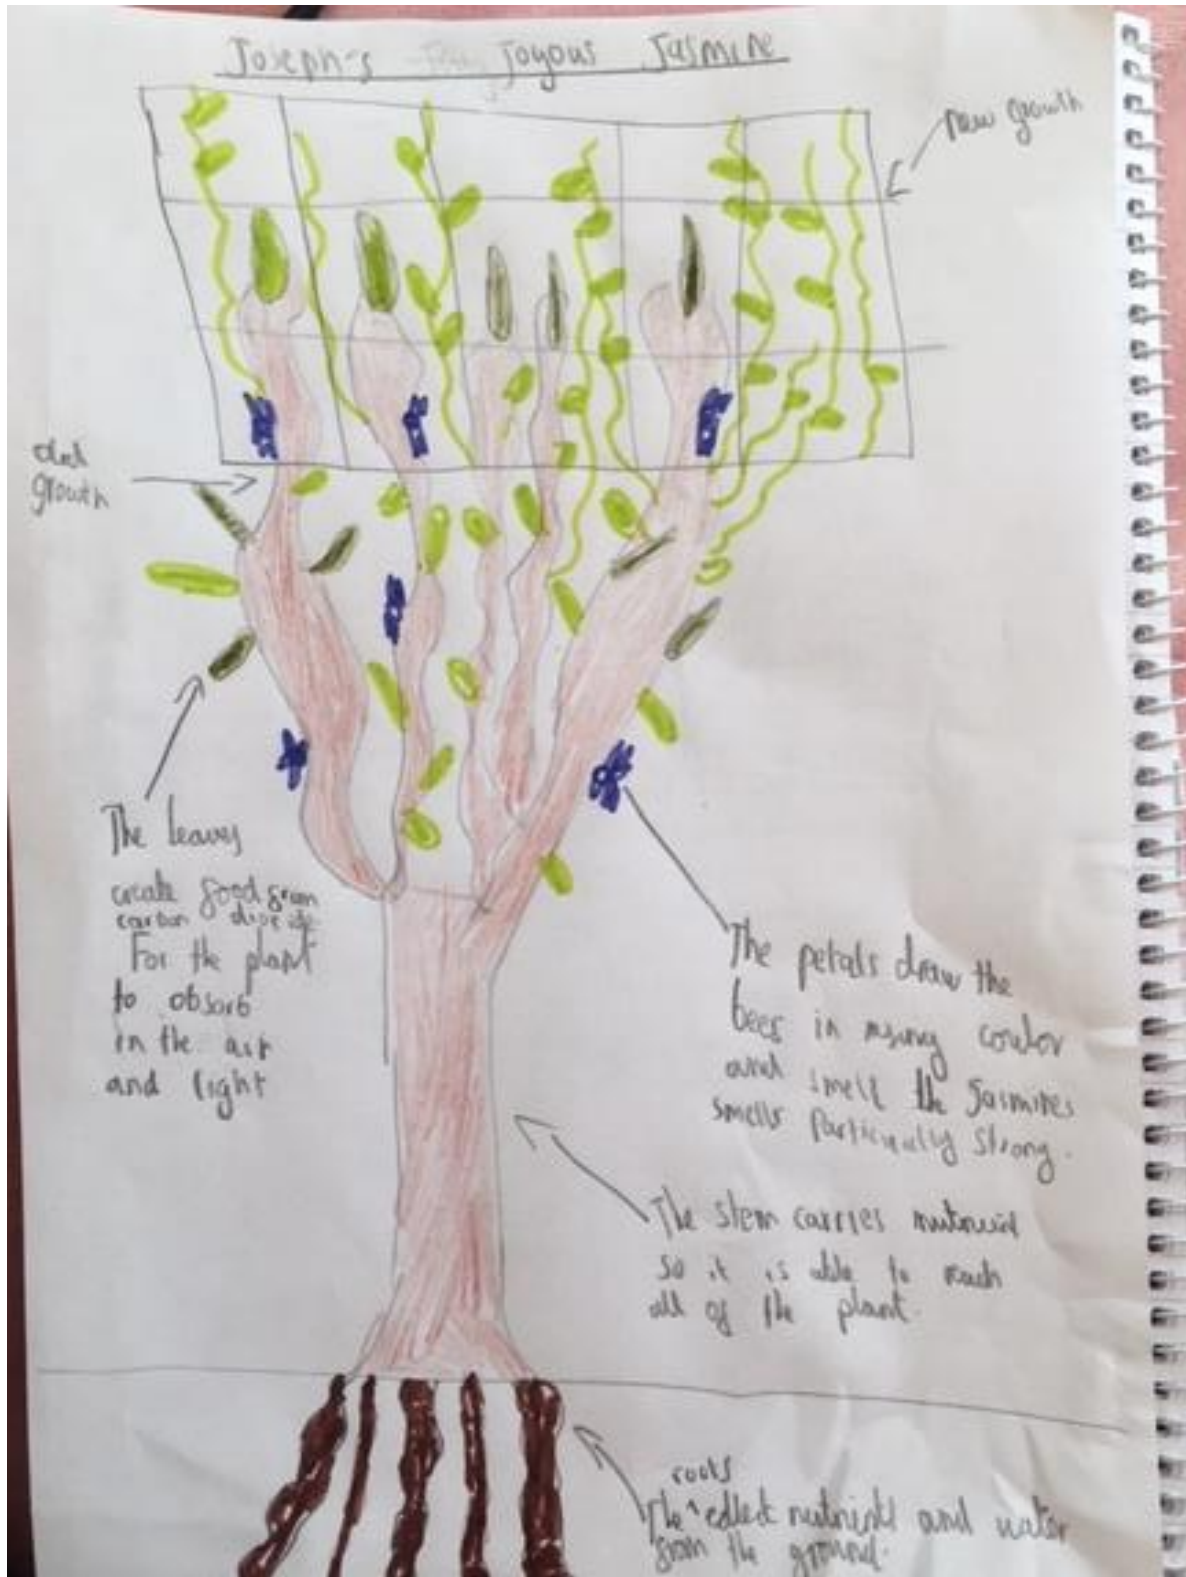

## Leaves

Leaves make good for plants from carbon dioxide in the air and sunlight.

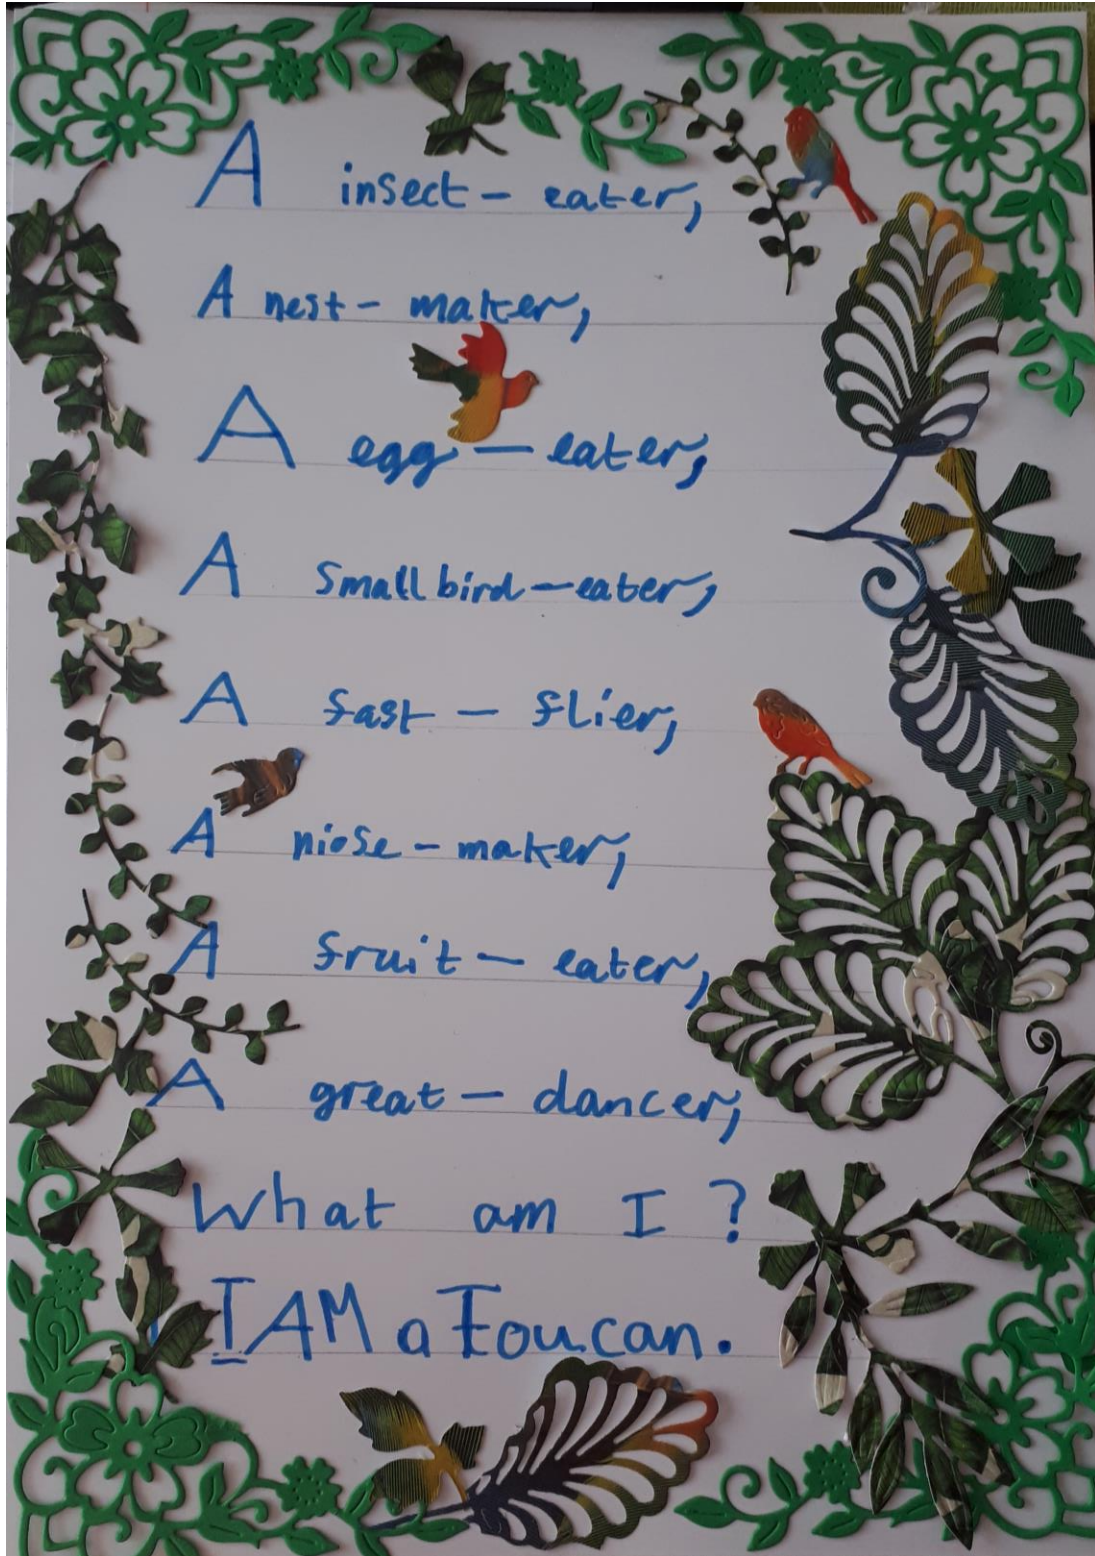

## Roots

Roots absorb minerals and water from the soil.  
They also help to keep the plant in the ground.
