

TORCH

By Harry stanbridge and
Ethan Echells

*DOES THE SHADOW CHANGE
THEN THE TORCH IS MOVED?*

1. *I PREDICT THAT THE
SHADOW IS MOVED IT
DOES CHANGE.*

***The things we are
keeping the same is
torch object ruler.***

Are results where then the torch was 10cm away from the object it was 8cm long.

We did it again but the torch was 20cm away from the object and it was 6cm long.

Next we did it again but it was 30cm away from the object and it was 5cm long.

I'm getting Tiered but we did it again but this time it was 40cm and it was 5cm long.

I'm about to fall asleep but I need to do some more this time we did 50cm and it was 4cm long.

I'm laying in my bed but I have to do one more and now it's 60cm and it was 4cm long.

But we made a
mistake we did
not measure it
quite right.

After a long time
we got it right.
Finally we got it
right.
